

Calibrators

- Establish a common place to keep a progressively growing list of calibrators, used by various groups.
- Make sure Agencies fund a long-term, systematic, repeated, routine action to expand the list (baselines, wavelength, hemispheres, accuracy class, variability, etc.).
- Agree progressively on a format for calibrators information.
- Feed-back calibrators results (especially secondary ones) on model builders for model improvements at requested accuracy level (ultimately 0.1 % ?).
